

***P'Tracks* for Posi-Track Skid Loaders Produced for Strength and Flexibility**

Global Track is the manufacturer of the *P'Track* rubber tracks for the ASV/CAT posi-trac style skid loaders.

P'Tracks are produced with internal high tensile strength fiber fabrics to keep the rubber track from over stretching and to keep the original lug pitch. If a track is over stretched or the lug pitch changes, the internal rubber lugs are more likely to be torn off.

P'Tracks are produced with a premium blend of natural and synthetic rubber developed for extended wear life and increased traction. Tracks produced with a higher percentage of synthetic rubber will cost less but tests show that they are more likely to fail prematurely.

P'Tracks are produced using our state of the art molding processes and are fully cured in the molds to keep their correct pitch. Tracks not fully cured in the molds cost less to produce, but they are more likely to be of inconsistent quality, can lose the correct pitch and result in the tearing out of the internal rubber lugs.

Global Track is also the manufacturer of *J'Track* OEM quality premium rubber tracks, *R'Tracks* valued priced rubber tracks for excavators and the sprocket driven track loaders, and the GTW Track Pads for the steel chain excavators.

For help in purchasing *P'Tracks* for your machine, please complete the form found under "Contact Us" on the navigation bar or call 1-800-556-9236 to speak to one of our track experts.
