

## Global Track - Manufacturer of the Premium J'Track Rubber Tracks

Global Track's Manufacturing Headquarters

Global Track produces OEM rubber tracks for several major machine manufacturers.

GT Mission Statement: Global Track is dedicated to Excellence, Innovation, and Consistent Quality.

Do not buy from a distributor! They do not have direct control over the quality of their rubber tracks. Their supplier can at any time stop supplying them, decrease the quality of the tracks & pads, increase their pricing, or limit warranty resolutions.

J'Tracks are manufactured with:

Premium 65% Natural Rubber and 35% Synthetic Rubber Compound Mixture developed for increased wear life & traction. Ask other companies what their mixture is, if they know it.

Continuous Wound Stainless Steel Cable Assemblies, the strongest internal cable design. Forged Metal Links that go through a special rubber bonding adhesive process, making the links less likely to be pulled out when the track is overstressed.

“State of the Art” computer controlled rubber presses guarantee correct mold cure time.

Why do some rubber tracks cost less?

1. Synthetic rubber is cheaper, and using too much synthetic rubber causes the track to crack, tear and fail prematurely.
2. Recycled rubber is cheaper, and recycled rubber is softer. Tracks produced with any recycled rubber are more likely to fail prematurely.
3. Tracks produced in old style flat molds without continuous wound cables are cheaper to produce, but they have over 40% less lengthwise strength and are more likely to stretch, have the cables and metal links be pulled out.
4. Tracks that are not cured in the mold the correct time, cost less to produce, but this can result in soft rubber spots that will result in premature track failure.

Why buy J'Tracks?

1. We can supply out of stocks direct from of our warehouse.
2. If you need a warranty resolution track, we can supply this from our warehouse, you do not need to wait until your next container order to receive it.
3. Global Track's engineers can design and produce the rubber tracks you need.
